TO: CHIEF ENGINEER

FREQUENCY STANDARD MEASURING SERVICES FOR AM: FM: & DTV:

Radio Works R.F. Consulting continues a long tradition of High Accuracy Frequency Standard Testing: It is with great pleasure that Radio Works R.F. Consulting is actively looking for clients who need these high accuracy measurements as a part of their FCC compliance requirements.

We will be utilizing methods that will "up the game" of Standards Measuring by introducing additional new pieces of test equipment that conform to the high standards of accuracy that utilize GPS time standards, and when necessary, we will travel to your location and perform your measurements in proximity to your transmitter location, instead of from a distance as was done in yesteryear.

At this time, we would like to offer high accuracy frequency readings four times per year, with additional measurements available upon request for a small charge. We will offer these annual services for a great low price per year of \$695.00. Your notification "Post Cards" will be Emailed to you so that you have an easier way to recall your measurements, and you will then have a permanent digital record of each measurement. Measurements will be made quarterly in January, April, July, and October.

Please log on to our colorful Web Site for full details.
